

Water Use Around the World

A **pictograph** displays data by using symbols. The **key** shows how much, or how many, of something each symbol represents.

Look at the pictograph to learn about water use in eight different countries. Then answer the questions below.

- How many gallons of water does represent? _____
- In which country does the average person use 50 gallons of water per day? _____
- On average, how much water per day does an American use? _____
How many more gallons is that than the amount used by an Ethiopian? _____
- True or false: On average, a person in the United States uses twice as much water each day as a person in France. _____
- In Mozambique, on average, a person uses one gallon of water per day. Add Mozambique to the graph.
- In one sentence, summarize what you learned from this graph. _____
